YEARLY REVIEWS 845, 859, 871

Zn phthalocyanine 113
Zooplankton 717

Printed and bound in Great Britain by BPCC Wheatons Ltd, Exeter

AIMS AND SCOPE

THE JOURNAL publishes papers on all aspects of photochemistry and photobiology, but it is primarily concerned with articles having either current or foreseeable biological relevance. Appropriate subjects include bioluminescence, chronobiology, environmental photobiology, photomedicine, photochemistry of biomolecules, photomorphogenesis, photomovement and photoreception, photosensitization, photosynthesis, phototechnology, spectroscopy, UV radiation effects and vision.

In addition to full-length research papers, the Journal publishes Research Notes and Technical Notes describing new developments or techniques that do not require a full-length paper. Review Articles are published from time to time. To help the reader keep pace with the literature, brief Yearly Reviews of recent literature in selected areas are published. New books are reported and many of these are reviewed. In addition, Rapid Communications are published to expedite the reporting of major breakthrough in the field.

A new feature, "Photobiology School" papers are intended for use as teaching materials. We anticipate that at some future date offprints from these papers will be collected and published as a textbook.

The editorial policy of the Journal is to publish manuscripts of the highest quality, combining scientific rigor with clarity and brevity. To this end, all manuscripts are carefully reviewed and every effort is made to provide useful editorial assistance to authors

NOTES FOR CONTRIBUTORS

1. *Submission of Papers:* Manuscripts in English, and with an English abstract not exceeding 200 words, should be sent directly to the Editor, Professor Pill-Soon Song. Books for review should also be sent to the Editor.

2. *Form of Contribution:* Contributions should include (a) four copies of the manuscript, one of which must be an original on good quality paper; the manuscript should be typed with double spacing throughout, including tables, etc., (b) one original set (not photocopies) of good quality drawings or glossy photographs of the figures *plus* three clear photocopied sets (provide four originals of any material that does not photocopy clearly), and (c) triplicate sets of any reprints or preprints of recent work that would be of critical importance to reviewers of the manuscript. Authors are encouraged to suggest reviewers of their manuscripts. Rapid Communications must be typed on the prescribed forms (available from the Editorial Office), with single spacing throughout.

Manuscripts should be prepared according to the order: Title Page (including Running Title, list of abbreviations used, 5–8 key index words, name, address, telephone number and telefax or telex number of the person to whom Editorial correspondence and reprint requests should be sent), Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgements, Appendices, References, Tables, Figure Captions and Figures.

3. *Style of Contribution:* As a guide for style, the Journal follows the *CBE Style Manual.* Physical units should conform to Le Système Internationale (SI), described in the CBE manual, and this Journal **25**, 237 (1977). All tables, figures and equations should be numbered with Arabic numerals. In the text, the words "equation" and "figure" will be abbreviated as "Eq." and "Fig.", except at the beginning of a sentence. Avoid hyphenation at the end of a line. *All abbreviations* must be defined in the text and in the abstract, with the following exceptions: DNA (deoxyribonucleic acid), RNA (ribonucleic acid), UV (ultraviolet), and IR (infrared). Abbreviations are to be avoided in abstracts.

4. *Figures:* All photographs, charts and diagrams are to be referred to as Figures and should be numbered consecutively. On the back of each figure the author should write lightly in pencil his/her name, the figure or plate number, and an indication of the orientation of the figure. Figures should be about twice the final printed size and generally should *not* be larger than $8\frac{1}{2} \times 11$ in. (21.5 × 28 cm), or should be folded in this dimension.

5. *References: References at the end of the manuscript* should be listed in *alphabetical* order on a separate sheet and should indicate the *inclusive pages*. Article titles are required for all manuscripts. If there is more than one publication in the same year for the same author(s), the letters "a", "b", etc., should be added to the year, on the Reference page and in the text. References should comply with the abbreviated title of the journal given in *Chemical Abstracts* (American Chemical Society). *References in the text* should include the last names of authors, followed by the year of publication in parentheses: the name of the first author followed by "*et al.*" should be used for references involving more than two authors. Examples:

In text:

"the subject has been reviewed by Beyer *et al.* (1984) ...". "the study by Jahan and Cooke (1985) is relevant ..."

On reference page:

Beyer, E. M., P. W. Morgan and S. F. Yang (1984) Ethylene. In *Advanced Plant Physiology* (Edited by M. B. Wilkins), pp. 111–126. Pitman Books, London.

Jahan, M. S. and D. W. Cooke (1985) Thermally stimulated luminescence of UV- and X-irradiated caffeine. *Photochem. Photobiol.* **41**, 343–349.

References listed at the end of the article should include only papers that have been *published or accepted for publication (in press).* Other work should be described in parentheses in the text. Example: "It is believed that light exists as quanta (A. Einstein, personal communication), and our findings agree with this (A. Jones, unpublished)".

6. *Footnotes:* Excessive footnotes are to be avoided. Footnotes to text statements or tables should be indicated by the symbols *, †, ‡, §, ‖ ¶.

7. *Temperatures:* All temperatures in Celsius are written in the form "18°C", but the degree sign is omitted for absolute temperatures (for example "10 K"). In the SI system, "K" means "degrees Kelvin". Also, note that "*M*" = "molar", and "mol" = "mole".

[Continued over

Notes for contributors—continued]

8. *Abbreviations:* Abbreviations are not pluralized and are not followed by a period. Thus, one says "0.1 h" or "12 h" but "0.1 ohm" or "10 ohms". (Exceptions are: Fig. and Figs., Eq. and Eqs., Dr. and Drs., etc.)

9. In describing radiation sources and detectors, precise models and quantified spectral information must be supplied. Dosimetric quantities, such as *fluence* (energy conveyed per unit area normal to a beam direction) or *dose* (energy per unit area incident on the surface of an irradiated object), should be given in radiometric units, together with their time rates, uncertainties, spatial uniformity and information about stray radiation. If the term *dose* represents absorbed energy, it should be designated as such. This specification constitutes an addition to the published list (*Photochem. Photobiol.* **25**, 237; 1977) of terminology and symbols of SI units adopted by this Journal.

10. *Proofs:* Alterations should be avoided, apart from the correction of printer's errors. Additional alterations will delay publication of an article and, *if excessive, may be charged to the author.*

11. *Reprints:* Reprints and a copy of the issue in which the article appears can be supplied at a reasonable cost if ordered at the time when the proofs are returned. A reprint order form will accompany proofs. It would be appreciated if authors would notify the publisher of any change of address which occurs while their paper is in press.

12. *Page charges:* To help defray the cost of publication, authors will be requested to pay to the American Society for Photobiology a fee of $35 per printed page for all manuscripts except Yearly Reviews. These charges will be levied at the time of appearance of page proof. The American Society for Photobiology will pay the page charges for any author who finds it impossible to meet these charges; such authors may wish to consider partial payment of page charges. *Payment or nonpayment of page charges will in no way influence decisions concerning acceptance of manuscripts.*

BENEFACTORS
of the American Society for Photobiology

"Benefactor" is a category of supporting membership; to qualify, an organization or individual must contribute $10,000 (minimum) to the Society in support of its programs.
